Description

Issue Description:

1. Point-wise text content should be in serial-wise 1,2,3,4 instead of bullet points
2. Remove bullet points from top text content

See attached screenshot/screen Record:

The screenshot shows a web browser window with the URL wasco.swadhasoftwares.com/wasco-services/water-conservation-tips. The page title is "Water Conservation Tips". The content includes a top tip: "Water Conservation reduces energy, water bills, and wears on the water distribution system. Conserve water whenever possible - contribute to an improvement in the supply for all." This tip is enclosed in a red box. Below it is a numbered list of 10 tips, also enclosed in a red box. The list items are:

1. Make sure your taps don't drip. A dripping tap can waste 2 gallons of water each hour.
2. Check your toilets for leaks. Put a little dye in the tank and if color shows in the bowl without flushing, there's a leak. Fixing it now will save money later because a leaking toilet can waste as much as 40,000 gallons of water in six months.
3. Fill two half-gallon plastic bottles filled with water or bricks; place them in the toilet tank. This reduces the amount of water needed for flushing from five to four gallons per flush.
4. Wash dishes with a basin of water instead of running water.
5. Use a bucket instead of a hose to wash cars and water plants.
6. Take bath or short showers.
7. DO NOT leave the shower running when soaping or scrubbing.
8. DO NOT let water run in the sink while shaving, brushing your teeth or lathering your face and hands. This wastes water and money.
9. Reuse sink and laundry water (grey water) to water plants.
10. Water your plants in the evening when there is less evaporation.

At the bottom of the list, it says: "Build and/or install a water tank for catchment and storage and use guttering to catch rainwater from the roof. Please contact WASCO for information on water treatment."

Water Conservation Tips

Water Conservation reduces energy, water bills, and wears on the water distribution system. Conserve water whenever possible - contribute to an improvement in the supply for all.

1. Make sure your taps don't drip. A dripping tap can waste 2 gallons of water each hour.
2. Check your toilets for leaks. Put a little dye in the tank and if color shows in the bowl without flushing, there's a leak. Fixing it now will save money later because a leaking toilet can waste as much as 40,000 gallons of water in six months.
3. Fill two half-gallon plastic bottles filled with water or bricks; place them in the toilet tank. This reduces the amount of water needed for flushing from five to four gallons per flush.
4. Wash dishes with a basin of water instead of running water.
5. Use a bucket instead of a hose to wash cars and water plants.
6. Take bath or short showers.
7. DO NOT leave the shower running when soaping or scrubbing.
8. DO NOT let water run in the sink while shaving, brushing your teeth or lathering your face and hands. This wastes water and money.
9. Reuse sink and laundry water (grey water) to water plants.

Fixed!

Water Conservation Tips

Water Conservation reduces energy, water bills, and wears on the water distribution system. Conserve water whenever possible - contribute to an improvement in the supply for all.

1. Make sure your taps don't drip. A dripping tap can waste 2 gallons of water each hour.
2. Check your toilets for leaks. Put a little dye in the tank and if color shows in the bowl without flushing, there's a leak. Fixing it now will save money later because a leaking toilet can waste as much as 40,000 gallons of water in six months.
3. Fill two half-gallon plastic bottles filled with water or bricks; place them in the toilet tank. This reduces the amount of water needed for flushing from five to four gallons per flush.
4. Wash dishes with a basin of water instead of running water.
5. Use a bucket instead of a hose to wash cars and water plants.
6. Take bath or short showers.
7. DO NOT leave the shower running when soaping or scrubbing.
8. DO NOT let water run in the sink while shaving, brushing your teeth or lathering your face and hands. This wastes water and money.
9. Reuse sink and laundry water (grey water) to water plants.
10. Water your plants in the evening when there is less evaporation.
11. Build and/or install a water tank for catchment and storage and use guttering to catch rainwater from the roof. Please contact WASCO for information on water treatment.
12. Check your water meter when there is a supply and no water is being used. If the reading changes - you have a leak. Have it fixed.
