

Orthocare Client Portal - Bug #12194

In the mobile app, when I complete an assessment, the default card is shown as selected. I checked this with the Neck Symptom assessment. Initially, I selected the 'No' option, but the default 'Over a Week' card was still shown as selected.

This is working for web and pointing devices but for touch devices we need to remove hover for small devices. When you touch outside the card or anywhere in screen its work like pointing device let me suggest should we remove hover on small screen?
