

Orthocare Client Portal - Bug #12719

Unable to proceed to next question if select upto 40...because in this assessment from backend we have assigned same symptom name in the main symptom question. Check description below & Discuss with bharat sir for this case

Description

The screenshot shows the Orthocare Symptoms Checker web application. The main content area displays a question: "what is your age?". Below the question are two buttons: "up to 40" and "over 40". A "Return" button is located at the bottom left of the question area. The browser's address bar shows the URL "orthocare.netlify.app/new-assessment". A notification at the top of the browser indicates an error: "We have encountered an error in Speech Recognition Service, please try again. Error Code: 1002". The sidebar on the left has "Assessment" selected. The Windows taskbar at the bottom shows the system tray with the date and time as 1:16 PM on 2/11/25.

In this assessment, when a new symptom "Leg" is added from the backend with 3 or 4 associated questions, and on the 3rd question, the symptom "Leg" is selected again, a conflict arises. Upon attempting the assessment on the frontend, when the user selects the same symptom "Leg" (which has a sub-symptom also named "Leg"), the system fails to proceed to the next question.

History

- Status changed from New to In Progress

#2 - 02/12/2025 04:36 PM - Shan UI Habib

- Status changed from In Progress to Resolved

As discussed with Bharat bhai same symptom will continue from the beginning just like others symptoms works in assessment now.

#3 - 02/12/2025 08:37 PM - priyanka Sharma

- Status changed from Resolved to Reopened

#4 - 02/13/2025 11:47 AM - Shan UI Habib

I checked on admin side Leg Pain have some garbage sequences were added during initial implementations please verify now.
