Description

Issue Description:

getting SQLSTATE[42S22] database issue when admin filters data with date-wise

See attached screenshot/screen Record:

The screenshot displays a web browser window with a URL: sakoon.digitalnoticeboard.biz/admin/show/booking/refund/filter?bookingid=&user.... The browser shows a PHP error message: "Illuminate \ Database \ QueryException" with the message "SQLSTATE[42S22]: Column not found: 1054 Unknown column 'booking_date' in 'where clause'". The error details include the SQL query: "SELECT * FROM `refunds` WHERE `id` > 0 AND date(`booking_date`) >= 2025-02-01 AND dat...". A green notification box on the right says "A column was not found" and suggests running migrations. The code editor shows the following PHP code snippet from `app / Http / Controllers / BookingController.php`:

```
629         $data['list']->where('booking_id', $bookingid);
630     }
631     if ($userid) {
632         $data['list']->where('patient_id', $userid);
633     }
634     if ($txt_id) {
635         $data['list']->where('refund_txt_id', $txt_id);
```

History
